- Basic electrical safety
- Basic electrical principles
- Class 1 & 2 appliances
- Testing methodology
- Practical testing work
- Understanding test results
- Tagging requirements
- Managing test data
- Putting processes in place

# Electrical Testing Courses

## In-service safety inspection and testing of electrical equipment (AS/NZS3760:2010)

**“Portable Appliance Testing is commonly known as PAT Testing”**

### OVERVIEW OF THIS COURSE

This course has been developed to give companies with requirements for equipment tested and tagged to AS/NZS 3760:2010 greater flexibility and control over downtime, costs and risks around portable appliance safety.

PAT testing can be performed by a well trained competent person, who has the skills and knowledge required to ensure it is done correctly and safely.

Having your own staff trained and competent to do this work efficiently, makes smart business sense. Our course goes beyond the minimum requirements. The course covers the important aspects of workplace safety, appropriate regulations, electrical principles, testing process and techniques, management of test data and potential customer issues.

### THE COURSE

The course is typically six hours in duration and is broken into segments catering for ease of learning. A comprehensive workbook provides course participants with a reference book for both during and after the course.

Those attending should be technically minded and able to demonstrate some mechanical aptitude with a willingness to learn and undertake this work for their employer or company.

A wide range of equipment commonly available for hire is reviewed and the testing requirements demonstrated with direct participant involvement.

#### Assessment

The tutor, assesses the participants competence throughout the day, coupled with practical involvement and a written test questionnaire.

### BENEFITS

You gain employees that are confident and competent to undertake this work for your business. They will have a sense of being valued and skilled; better able to make decisions on the safety of equipment, service or repair options.

The course also covers understanding and using your current PAT equipment or advice on choosing a suitable PAT tester by evaluating and establishing the requirements of the business.

Course cost \$295.00 + GST per person
